Summary

UCSD data scientist with extensive experience in machine learning, LLM pipelines, and statistical modeling. Led a team to 1st place at Purdue's national autonomous vehicle competition, built LLM digital twins piloted by 5 companies, and presented risk models to Deloitte leadership.

Education

University of California, San Diego Sep 2021 – Jun 2025
Bachelor of Science in Data Science *San Diego, CA*
Coursework: Machine Learning, Deep Learning, Probabilistic Modeling, Statistics, Recommender Systems, Big Data

Technical Skills

Languages: Python, SQL (PostgreSQL, BigQuery, Snowflake), R, Java, JavaScript/TypeScript
Python Data Stack: NumPy, SciPy, pandas, scikit-learn, Statsmodels, XGBoost, PySpark, matplotlib, Seaborn, Plotly
ML & AI: PyTorch, TensorFlow, Hugging Face Transformers, LangChain/LangGraph, ChromaDB
Tools & Platforms: AWS (Lambda, EC2), Apache Spark, Databricks, Airflow, Docker, FastAPI, Git, W&B, Tableau

Experience

Walt Disney World, Disney College Program Aug 2026 – Present
Attractions Cast Member, TRON Lightcycle / Run *Orlando, FL*
- Manage safety-critical ride operation across every crew position, including track safety and security.

Exponential Intelligence Sep 2025 – Sep 2026
Machine Learning Intern *Irvine, CA*
- Built an end-to-end LLM pipeline generating AI digital twins that simulate survey respondents, used to assist 5 businesses with survey administration and decision making.
- Work led to a pilot program in which 5 companies adopted the statistical survey pipeline.
- Measured alignment between twins and real respondents with Jensen-Shannon Divergence and chi-square tests, and designed re-prompting strategies to correct biases like social desirability and extreme responses.

Halicioğlu Data Science Institute Sep 2024 – Aug 2025
ML Research Assistant, Autonomous Vehicle Development *San Diego, CA*
- Designed, trained, and deployed CNN-based perception and control models on low-power embedded hardware with stereo and RGB-D cameras, fine-tuned on UCSD's Supercomputer Center.
- Benchmarked CNNs against LLMs and LVMs across local and cloud deployments.
- **Led team to 1st place at Purdue's national autonomous vehicle competition.**

Deloitte Mar 2023 – Aug 2023
Data Science Intern *San Diego, CA*
- Trained XGBoost and regularized regression models on 50,000+ HHS records, identifying proximity to low-income neighborhoods and gambling advertisements as top predictors of substance abuse risk.
- Turned model results into strategic recommendations and presented them to senior leadership through interactive Plotly dashboards.

Scripps Institution of Oceanography Sep 2022 – Sep 2024
Data Research Assistant *San Diego, CA*
- Built Python ETL pipelines to clean and analyze 70+ years of climate records across 60 coastal airports.
- Used sliding-window PCA and ridge regression to link urbanization to reduced cloud cover and higher local temperatures, contributing to a peer-reviewed publication update.

Projects

Amazon Purchase Dataset – Large-Scale ML Pipeline Oct 2025 – Dec 2025
- Engineered distributed ML pipelines with AWS Lambda, EC2, and Apache Spark to ingest and clean 16M+ rows of Amazon purchase data.
- Implemented one-hot encoding, distributed PCA, and feature engineering in BigQuery to reduce dimensionality for downstream models.
- Optimized batch calculation of RMSE across the full dataset to evaluate models at scale.
