Summary

Data scientist (B.S. Data Science, UC San Diego) focused on statistical modeling, forecasting, and LLM pipelines. Built a day-ahead demand forecast for 2,296 Citi Bike stations, LLM digital twins piloted by 5 companies, and risk models presented to Deloitte leadership; led a team to 1st place at Purdue's national autonomous vehicle competition.

Education

University of California, San Diego Sep 2021 – Jun 2025
Bachelor of Science in Data Science *San Diego, CA*

Relevant Coursework

Machine Learning, Deep Learning, Probabilistic Modeling & ML, Statistical Methods, Recommender Systems
Scalable Analytics, Data Management, Data Structures & Algorithms, Data Visualization, Optimization

Technical Skills

Languages: Python, SQL (PostgreSQL, BigQuery, Snowflake), R, Java, JavaScript/TypeScript, HTML/CSS, Linux
Statistics & ML: Hypothesis testing, bootstrap confidence intervals, regularized regression, gradient boosting, PCA, time-series forecasting, conformal prediction, CNNs
Libraries: pandas, NumPy, SciPy, scikit-learn, Statsmodels, XGBoost, PySpark, PyTorch, TensorFlow, Hugging Face Transformers, LangChain/LangGraph, ChromaDB, Seaborn, matplotlib, Plotly, D3.js
Tools & Platforms: AWS (Lambda, EC2), Apache Spark, Airflow, Databricks, Snowflake, Docker, FastAPI, Git/GitHub, Weights & Biases, Tableau, Power BI, MongoDB, Leaflet, pytest, GitHub Actions

Experience

Walt Disney World, Disney College Program Aug 2026 – Present
Attractions Cast Member, TRON Lightcycle / Run *Orlando, FL*

- Manage safety-critical ride operation across every crew position, including track safety and security.

Exponential Intelligence Sep 2025 – Sep 2026
Machine Learning Intern *Irvine, CA*

- Built an end-to-end LLM pipeline generating AI digital twins that simulate survey respondents across political subgroups; 5 companies adopted it in a pilot program for survey administration and decision making.
- Measured alignment between twins and real respondents with Jensen-Shannon Divergence and chi-square tests of homogeneity, using a Python pipeline (pandas, NumPy, SciPy, Seaborn).
- Designed re-prompting strategies to correct LLM failure modes, including social desirability bias, extreme response tendency, and prototype reasoning.
- Trained classification models to categorize survey domains and applied supervised and unsupervised techniques to surface where twins diverged from real respondents.

Halicioğlu Data Science Institute Sep 2024 – Aug 2025
ML Research Assistant, Autonomous Vehicle Development *San Diego, CA*

- Designed and deployed CNN-based perception and control models on low-power embedded hardware, integrating stereo and RGB-D cameras for real-time 3D scene understanding.
- Trained and fine-tuned models on UCSD's Supercomputer Center across 3 prototype configurations.
- Benchmarked CNNs against LLMs and LVMs across local and cloud deployments, profiling performance on CPUs vs. dedicated AI accelerators.
- **Led team to 1st place at Purdue University's national autonomous vehicle competition.**

Scripps Institution of Oceanography Sep 2022 – Sep 2024
Data Research Assistant *San Diego, CA*

- Built Python ETL pipelines to ingest and clean 70+ years of climate records across 60 coastal airports, automating previously manual workflows.
- Used sliding-window PCA, polynomial regression, and ridge regression to link urbanization to reduced cloud cover and higher local temperatures.
- Validated findings with climate scientists, contributing to a peer-reviewed publication update.

Deloitte Mar 2023 – Aug 2023

Data Science Intern *San Diego, CA*

- Trained XGBoost and regularized regression models on 50,000+ U.S. Department of Health and Human Services records, identifying proximity to low-income neighborhoods and gambling advertisements as top predictors of substance abuse risk.
- Turned model results into strategic recommendations and presented them to senior Deloitte leadership through interactive Seaborn and Plotly dashboards.

Projects

Pokemon RAG AI Agent – LLM Knowledge Retrieval System Mar 2026 – Present

- Built a RAG-powered conversational AI agent over a structured Pokemon knowledge base; implemented end-to-end document ingestion, text chunking, and vector embedding pipelines using LangChain and ChromaDB; designed semantic retrieval with dense vector search and prompt-engineered LLM responses for multi-turn question answering.

NYC Citi Bike Analysis – Demand Forecasting & Rebalancing Nov 2025 – Nov 2026

- Built a tested Python pipeline (pandas, PyArrow, Shapely) that cleans 44M+ 2024 Citi Bike trips and joins NOAA weather and NYC bike lane data to answer where bikes run out, and when.
- Forecast next-day hourly demand at 2,296 stations with Poisson gradient boosting (scikit-learn): 86–94% citywide daily accuracy, station-hour error 11–17% below the best baseline, and 3 of 3 monthly backtests won.
- Sized the rebalancing problem at 5,927+ bikes stranded each weekday morning across 676 draining and 409 filling stations; found commute-hour rain cuts rides 29% (95% CI 22–32%) vs. 7% for off-peak rain.
- Published an interactive site with Leaflet maps, SVG charts, and 80% conformal prediction bands; CI runs leak tests and checks every reported number against the data.
- Added a member vs. casual rider classifier on leak-free features (ROC-AUC 0.77) and regression with 14-day block-bootstrap intervals for weather effects.

Organ Trail – Interactive Surgery Data Explorer Jan 2026 – Feb 2026

- Built a D3.js scrollytelling site with a team of 3 over 6,000+ hospital surgery cases, showing how patient age and surgical position relate to operation type and duration; added an interactive duration estimator from filtered case averages so non-technical users can explore trends without writing code.

Reddit NLP Pipeline – Deep Learning Text Generation Nov 2025 – Jan 2026

- Trained and evaluated a character-level deep learning model in TensorFlow on unstructured corpora from Reddit's top 200 communities; designed a benchmarking framework comparing architectural configurations against perplexity metrics; authored paper analyzing domain-specific language pattern capture.

Amazon Purchase Dataset – Large-Scale ML Pipeline Oct 2025 – Dec 2025

- Engineered distributed ML pipelines with AWS Lambda, EC2, and Apache Spark to ingest and clean 16M+ rows of Amazon purchase data.
- Implemented one-hot encoding, distributed PCA, and feature engineering in BigQuery to reduce dimensionality for downstream models.
- Optimized batch calculation of RMSE across the full dataset to evaluate models at scale.

Seal Health Modeling – Human Impact on Alaskan Seals Sep 2025 – Nov 2025

- Merged four NOAA and Alaska Fish & Game datasets to test whether ocean-economy activity predicts Alaskan seal health; re-validated the original ridge model (R^2 0.91 on a 3-row test split) with leave-one-out cross-validation across 5 models and permutation importance, showing the fit did not generalize on 13 yearly observations and reporting that openly.

San Diego Parking Meter Analytics Dashboard Sep 2025 – Oct 2025

- Developed a geospatial analytics dashboard using D3.js to visualize 100,000+ parking meter citations across San Diego; created interactive daily frequency histograms and a geospatial heat map enabling drivers to identify optimal parking times and locations.
